a Fixed: one element's operation sequence
segment 0: acc = 0; acc = mma(x, w, acc), k16 ascending
p_0
segment 1: acc = 0; acc = mma(x, w, acc), k16 ascending
p_1
$y = \text{round}((+0 + p_0) + p_1)$, $S = S(N, K, t_{\max})$: weight shape only
b Free: everything the tuner may choose
output tiling
small-M warps, CUTLASS 32×64 … 128×256
k-stage depth / pipeline
32- or 64-deep stages, cp.async rings
stream-K cut
fp32 accumulator handed on, chain unbroken
segment placement
same CTA, separate CTAs, or warps
who folds
last arrival folds in ascending order
